**6000 & 8000 lb Lifts**
Includes all components except the galvanized bolts, nuts and washers to attach the lift to the already existing pilings. And the boards for the bunks.

**Electrical Requirements:**
- 6K = Two 3/4hp motors at 22 amps minimum, # 10 wire*
- 8K = Two 1hp motors at 26 amps minimum, # 8 wire*

---

The Boat Hoist USA hoists are secured to the top beam with 1/2” x 1 1/2” bolts (included). Mount the back cover between the gear plate and top-beam first, then align the hole in the drive pipe with the hole in the large gear sleeve. Insert the gear sleeve bolt and “snap” the front cover to the back cover.

One hoist is wired with extra cable so you can mount both standard switches side by side. Do not attempt to wire both hoists to one drum switch. We recommend installing the GR2 GEM Remote (Part # 400013). The GR2 is designed to operate 1–2 motors at the same time and is designed for this type of boat lift.

---

* Wire size depends on length of wire from main power to lift. Refer to the wire chart on page 8 of the Boat Hoist USA Equipment Guide. The Equipment Guide can be found in Product Support Center on our website: www.bh-usa.com.
